DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 9/15/03 with respect to claims 1, 4 and have been considered but are moot in view of previous of rejection.
2. In response applicants' argument "Soliman fails to teach call recovery". However, Soliman discloses "action to establish or receiver-establish calls" (see par. 0030) reads on "call recovery", and Soliman discloses "the present method tests the pilot strength to determine whether the paging channel was lost because the wireless unit is too far from the base station, or because of significant interference on the paging channel. The present method test to determine whether another strong pilot channel exists" (see par.0031) reads on first and second pilot strength measurement message.
3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Soliman (US Pub. 2002/0114288).

Regarding claims 1 and 4, Soliman discloses a wireless communication system, a method for call recovery (130) comprising:

transmitting a pilot strength measurement message at a first transmit power level (see par. 0041, 0063 and fig.3);

waiting a predetermined time period (see par.0070); and

transmitting the pilot strength measurement message at a second transmit power level, wherein the second transmit power level is greater than the first transmit power level (see par.0031).

Regarding claim 2, Soliman discloses the second transmit power level is a maximum transmit power level (see 138, fig.2). "Another strong Pilot" reads on "second transmitting maximum power level" with broadest reasonable

Art Unit: 2684

interpretation such as second power level is maximum or higher compare to the first.

Regarding claims 3 and 9, Soliman discloses a computer program stored on a computer readable medium (see par. 0074, fig.4).

Regarding claim 5, Soliman discloses transmitting a pilot strength measurement message at each transmit power level (see 164, 166, 174 fig.3).

Regarding claim 6, Soliman discloses pilot strength measurement messages are transmitted at predetermined time intervals (see par.70).

Regarding claim 7, Soliman discloses the pilot strength measurement message includes a preamble message (see par.0040).

Regarding claim 8, Soliman discloses all limitations as claim 1 and 3 above.
